| Team ID       |              |
| Project Name  | HouseHunt    |
| Maximum Marks | 2 Marks      |

**Proposed Solution Template:**

Project team shall fill the following information in the proposed solution template.

| S.No. | Parameter                                | Description                                                                                                                                                |
|-------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.    | Problem Statement (Problem to be solved) | Difficulty in finding verified, affordable housing quickly.                                                                                                |
| 2.    | Idea / Solution description              | HouseHunt: A centralized web application (MERN stack) connecting buyers/renters with verified property owners, offering advanced search and virtual tours. |
| 3.    | Novelty / Uniqueness                     | AI-based recommendations, verified owner badges, and a streamlined UI/UX.                                                                                  |
| 4.    | Social Impact / Customer Satisfaction    | Reduces time to find housing, increases trust, and simplifies the rental/buying process for the community.                                                 |
| 5.    | Business Model (Revenue Model)           | Freemium model: Free for seekers, premium listing fees for owners and agents.                                                                              |
| 6.    | Scalability of the Solution              | Highly scalable cloud-based architecture using MongoDB and Node.js.                                                                                        |
