

# User Acceptance Testing (UAT) Template

|               |                       |
|---------------|-----------------------|
| Date          | July 5 – July 9, 2026 |
| Team ID       |                       |
| Project Name  | House Rent            |
| Maximum Marks | 100                   |

## Project Overview:

Project Name: House Rent

Project Description: A full-stack MERN web application that connects property owners with potential renters. Owners can list properties, manage bookings, and approve/reject renter requests. Renters can browse listings, book properties, and track their booking status in real-time.

Project Version: 1.0.0

Testing Period: July 5, 2026 to July 9, 2026

## Testing Scope:

- User Registration & Login (Renter / Owner roles)
- Property Listing – Add, Edit, Delete by Owner
- Property Search & Filter by Location, Price, Type
- Property Booking by Renter
- Booking Approval / Rejection by Owner
- Booking Status Tracking by Renter
- Owner Dashboard – View All Bookings
- Renter Dashboard – View My Bookings
- Image Upload for Property Listings
- Responsive UI across Desktop and Mobile
- As a Renter, I can register, log in, search properties, and book them.
- As an Owner, I can list properties, upload images, and manage booking requests.
- As an Owner, I can approve or reject renter booking requests.
- As a Renter, I can view the real-time status of my bookings.
- As an Admin/Owner, I can ensure only one renter is approved per property per date.

## Testing Environment:

URL/Location: <https://househunt-demo.surge.sh/>

Credentials (if required): Renter – renter@test.com / Test@123 | Owner – owner@test.com / Test@123

## Test Cases:

| Test Case ID | Test Scenario                  | Test Steps                                                                                                                                             | Expected Result                                                    | Actual Result                                                   | Pass/Fail |
|--------------|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|-----------------------------------------------------------------|-----------|
| TC-001       | User Registration              | 1. Navigate to /register<br>2. Fill in name, email, password, and role (Renter/Owner)<br>3. Click "Register"                                           | User account is created and redirected to dashboard                | User account created successfully; redirected to dashboard      | Pass      |
| TC-002       | User Login                     | 1. Navigate to /login<br>2. Enter valid email and password<br>3. Click "Login"                                                                         | User is authenticated and redirected to their role-based dashboard | Login successful ; correct dashboard displayed based on role    | Pass      |
| TC-003       | Owner adds a Property Listing  | 1. Login as Owner<br>2. Click "Add Property"<br>3. Fill in title, description, price, location, type<br>4. Upload property images<br>5. Click "Submit" | Property is listed and visible to renters on search page           | Property listed successfully and appeared in search results     | Pass      |
| TC-004       | Property Search & Filter       | 1. Login as Renter<br>2. Enter location in search bar<br>3. Apply price range and property type filters<br>4. Click "Search"                           | Filtered list of properties matching the criteria is displayed     | Correct filtered results returned based on input criteria       | Pass      |
| TC-005       | Renter Books a Property        | 1. Login as Renter<br>2. Open a property listing<br>3. Select check-in and check-out dates<br>4. Click "Book Now"                                      | Booking request is submitted with "Pending" status                 | Booking submitted; status shown as Pending in Renter dashboard  | Pass      |
| TC-006       | Owner Views & Approves Booking | 1. Login as Owner<br>2. Go to Owner Dashboard → Bookings<br>3. Select a pending booking<br>4. Click "Approve"                                          | Booking status changes to "Approved"; renter notified              | Booking status updated to Approved; visible in Renter dashboard | Pass      |
| TC-007       | Owner Rejects a Booking        | 1. Login as Owner<br>2. Go to Owner Dashboard → Bookings<br>3. Select a pending                                                                        | Booking status changes to "Rejected"                               | Booking rejected and status updated correctly                   | Pass      |

|        |                                  |                                                                                                                                     |                                                                          |                                                                   |      |
|--------|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|-------------------------------------------------------------------|------|
|        |                                  | booking<br>4. Click "Reject"                                                                                                        |                                                                          | in both<br>dashboards                                             |      |
| TC-008 | Renter Views Booking Status      | 1. Login as Renter<br>2. Go to "My Bookings"<br>3. Check the status of submitted bookings                                           | All bookings displayed with correct status (Pending/ Approved/ Rejected) | Booking statuses displayed accurately and updated in real time    | Pass |
| TC-009 | Owner Edits a Property Listing   | 1. Login as Owner<br>2. Go to "My Listings"<br>3. Click "Edit" on a property<br>4. Update price and description<br>5. Save changes  | Property details updated and reflected immediately on listing page       | Property updated successfully; changes visible to renters         | Pass |
| TC-010 | Owner Deletes a Property Listing | 1. Login as Owner<br>2. Go to "My Listings"<br>3. Click "Delete" on a property<br>4. Confirm deletion                               | Property removed from listings; no longer searchable by renters          | Property deleted and no longer appears in search results          | Pass |
| TC-011 | Image Upload for Property        | 1. Login as Owner<br>2. Add or Edit a property<br>3. Upload multiple images<br>4. Save                                              | Images are uploaded and displayed on the property listing page           | Images uploaded and rendered correctly on listing detail page     | Pass |
| TC-012 | Responsive UI on Mobile          | 1. Open the application on a mobile device (or DevTools mobile emulator)<br>2. Navigate through Home, Listings, and Dashboard pages | All pages render correctly on small screens with proper layout           | UI adapts correctly to mobile screen; navigation and forms usable | Pass |
| TC-013 | Invalid Login Attempt            | 1. Navigate to /login<br>2. Enter incorrect email and password<br>3. Click "Login"                                                  | Error message displayed; user not authenticated                          | Error "Invalid credentials" shown; no access granted              | Pass |

**Bug Tracking:**

| Bug ID | Bug Description                                         | Steps to reproduce                                                                                                                                                                                                                                                                                                                                                                                                  | Severity | Status | Additional feedback                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|---------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BG-001 | Concurrent Booking Race Condition – Double Approval     | <ol style="list-style-type: none"> <li>1. Two renters (Renter A &amp; Renter B) both book the same property for overlapping dates</li> <li>2. Owner opens dashboard and sees two Pending requests</li> <li>3. Owner quickly approves Renter A</li> <li>4. Before the database updates, Owner also approves Renter B</li> <li>5. Both bookings end up in "Approved" state for the same property and dates</li> </ol> | High     | Open   | <p>This is a critical data-consistency bug. The backend does not implement atomic locking or a "first-come-first-served" guard when approving bookings. Recommended fix: use a database transaction that checks if any other approved booking already exists for the same property and date range before committing the second approval. Alternatively, auto-reject all other pending bookings as soon as one is approved for the same slot.</p> |
| BG-002 | Booking status not refreshed without manual page reload | <ol style="list-style-type: none"> <li>1. Renter submits a booking and stays on "My Bookings" page</li> <li>2. Owner approves the booking from their dashboard</li> </ol>                                                                                                                                                                                                                                           | Medium   | Open   | The Renter dashboard does not use real-time updates (e.g.,                                                                                                                                                                                                                                                                                                                                                                                       |

|  |  |                                                                        |  |  |                                                                                                                                                    |
|--|--|------------------------------------------------------------------------|--|--|----------------------------------------------------------------------------------------------------------------------------------------------------|
|  |  | 3. Renter's page still shows "Pending" status until manually refreshed |  |  | WebSocket or polling). A periodic polling mechanism or Socket.io integration is recommended so renters see status changes without a manual reload. |
